

HardHat Security Commitment

HardHat takes the privacy and security of our clients' business data very seriously.

We use and follow industry best practices, including:

- security controls based on the ISO 27001 Information Security Management Standard;
- globally recognised ISO 9001 Quality Management System Standard
- use of a secured encrypted channel, for all communication, ensuring that the transmission of data between the computer/browser and the HardHat product is not compromised;
- compliance with the Australian and New Zealand privacy laws, including the Australian Privacy Principles. For more details, please visit [HardHat Limited Privacy Policy](#)

Built on a trusted platform

The HardHat application is natively developed and deployed on the Salesforce platform.

Being a 100% native application, HardHat inherits all of salesforce platform features, credentials, certifications and capabilities.

A full list of these capabilities can be found at Salesforce Trust site:

<https://trust.salesforce.com/en/>

There are three sections to this site which cover:

1. Security - <https://security.salesforce.com/>
2. Compliance - <https://compliance.salesforce.com/en>
3. System Status - <https://trust.salesforce.com/en/#systemStatus>

HardHat and Salesforce are committed to maintaining a robust, comprehensive and transparent global privacy and security program. HardHat and Salesforce builds security into everything we do so businesses can focus on growing and innovating. Together, with our customers, HardHat and Salesforce treats security as a team sport - investing in the necessary tools, training, and support for everyone.

To report a security vulnerability, or for more information please contact legal@hardhat.com
